SVEVA FONTS

In 2003 Andreas Seidel designed the first version of Sveva - Sveva Versal. He was playing with the new possibilities of the OpenType font format. He was able to include many of the crazy letter combinations that designers and sign painters invented in the best years of Art Nouveau.

Looking back, he felt that this font was more of a "quick fix". It was designed and developed in just two months and was the second release of a type fonts. Nevertheless, it continues to please its users today and is often used for book titles, especially for children's, young adult and fantasy books.

As time went on, Andreas was often annoyed by the fact that the Sveva Versal was not very logical and often seemed too thin. In book titles, the Sveva Versal was therefore often contoured or a 3D effect was used to make it appear visually stronger.

Since about 2020, with the upcoming 20th anniversary of the font in mind, he had been working on a new Sveva alphabet with more consistent and logical characters. The whole thing was drawn from thin to very bold. When the alphabet and figures were finished in early 2022, he worked intensively on the new weights for Sveva. The new, bolder weights now work better on detailed backgrounds. Although these are technically completely new fonts, the name of the Sveva family remains the same.

Since the old Sveva uses the style name "Versal", it can be used well together with the new font weights (Light, Regular, Medium, Bold, Black, Ultra). However, the new Sveva fonts use completely different opentype features.

Headlines set in Sveva Versal cannot be 100% replaced by the new Sveva styles. You have to use the correct OpenType functions

or set the alternate characters manually. However, you will be able to create similarly exciting titles.

— Have fun!
